Check directly with your ISP for compatibility																					

*Note: the SB8200 and SBG8300 modems are the best choice for Gigabit speed packages. You do not need to subscribe to those packages in order to use the modem. However, if you currently subscribe to a Gigabit speed package, check with your Cable Internet Provider before purchasing a modem to be sure they do not have specific requirements.

Approved this Cable Internet Provider has a formal test process and the modem has been tested on their network and approved for use.

Compatible this Cable Internet Provider does not have a formal test process but will provision the modem on their network.

Pending the modem is either in a testing phase with the Cable Internet Provider, or they have not yet advised if they will provision the unit on their network.
